## Overview

---

With Handy Safe program you can have all important information in one place, safe, secure, easy to access, and always with you.

You can store credit card PINs, calling cards, user names, passwords, codes, accounts (email, Internet, shopping, bank), web pages, addresses, and much more.

Handy Safe utility has over 35 unique information forms to store everything.

Over 35 built-in icons to associate with your records help you get organized in style.

Handy Safe password protection and strong Blowfish 448-bit data encryption (<http://www.counterpane.com/blowfish.html>) keep your information private and secure.

---

## Login

---

When you start Handy Safe, you go to the login view.

At the first start, Handy Safe will prompt you to set a password for your data. Remember it, because if you forget your password, you won't be able to access your data.

Next time when you start Handy Safe, it will prompt you to enter your password. Type the password in the edit box and press **Done**.

✎ If you forgot your password, delete Handy Safe data files (see **Sync & Backup** section). You will lose all your data, but will be able to use Handy Safe further.

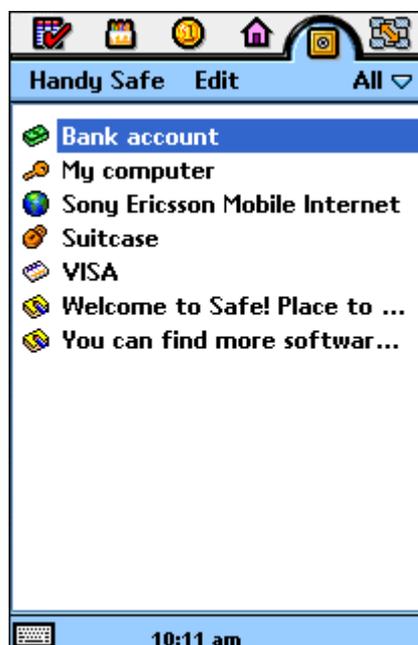

---

## Main view

---

The main view of Handy Safe shows the list of the records with their icons. Click on a record to view the record details.

You can filter the list by choosing a **folder** in the top right corner. There are several default folders: Business, Personal, Samples. Select **All** to see all records. Select **Edit folders** to create new or modify existing folders.

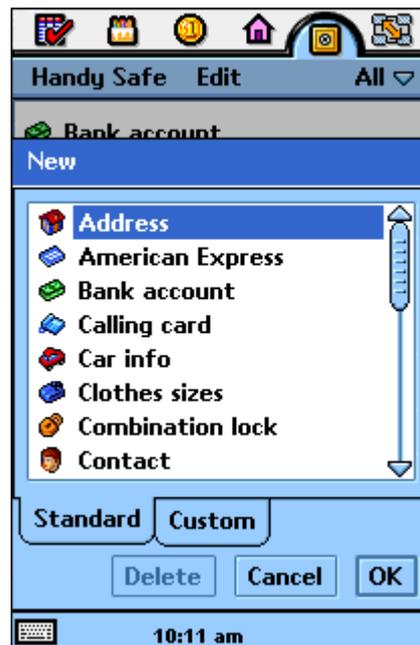

---

## Creating new record

---

Select **New** on the **Handy Safe** menu. In the appeared dialog select the type for a new record. You can choose between **standard** types and **custom** types. See **Custom types** section for more info.

Then fill the record details and press **Back** button to return to the main view.

☞ You can also write a note for the record by selecting the **Note** tab at the bottom.

In the upper right corner select the **folder** to put this record in.

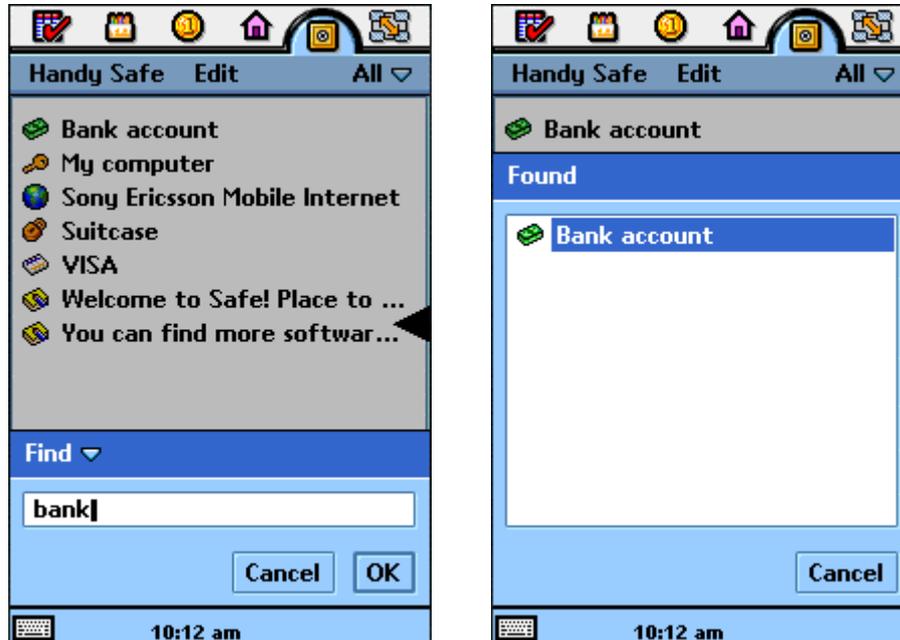

---

## Finding records

---

Select **Find** on the **Handy Safe** menu and type a word or phrase to search for.

Handy Safe will list the found records if any. Click on any record to view it.

---

## Editing records

---

Click on any record in the main view to see its details. The record will be shown in the **read-only** mode. To modify it, select **Edit** on the **Edit** menu.

When editing the record you can modify the content of the record fields. You can also **Add / Edit / Delete** the fields via the **Edit** menu.

The screenshot shows the 'Handy Safe' application interface. At the top, there is a navigation bar with icons for a list, calendar, home, and camera. Below the navigation bar, the title bar reads 'Handy Safe Edit Samples'. The main area contains a form with the following fields:

- Card: VISA
- Bank: (empty)
- First name: John
- Last name: Smith
- Card#: 111122223333
- Expires: 01/05/2006
- PIN: 98765
- If lost: 1234567

At the bottom of the screen, there is a status bar with a keyboard icon and the time '10:14 am'.

---

## Changing password

---

Select **Set password** on the **Edit** menu to change your password. Type the new password in the appeared dialog and press **Done**.

---

## Custom types

---

You can create your own types of records, not only use the standard types.

To create a new type:

- Create a new record of any standard type, which is most close to your purpose.
- Edit the record. Add the required fields via **Add field** on the **Edit** menu. Delete the useless fields via **Delete field** on the **Edit** menu.
- Select **Save as type** on the **Handy Safe** menu. And type the name of the new type.

Next time when you create a new record, this type will be in the **Custom** tab of the **New** dialog.

The screenshot shows the 'Save as custom type' dialog. The title bar reads 'Handy Safe Edit Unfiled'. The main area contains two text input fields labeled 'custom 1' and 'custom 2'. Below the input fields, there is a section titled 'Save as custom type' with a dropdown arrow. Underneath, the text 'Type name:' is followed by a text input field containing 'custom type'. At the bottom, there are 'Cancel' and 'Done' buttons. The status bar at the bottom shows the time '10:16 am'.

The screenshot shows the 'New' dialog. The title bar reads 'Handy Safe Edit All'. The main area has a blue header 'New' and a list containing one item: 'custom type'. Below the list, there are two tabs: 'Standard' and 'Custom', with 'Custom' selected. At the bottom, there are 'Delete', 'Cancel', and 'OK' buttons. The status bar at the bottom shows the time '10:17 am'.

---

## Preferences

---

Select **Preferences** on the **Edit** menu to change program options:

- **Lock in background** – this will lock Handy Safe when you switch to another application
- **Autolock after** – this will lock Handy Safe after the specified timeout

---

## Sync & Backup

---

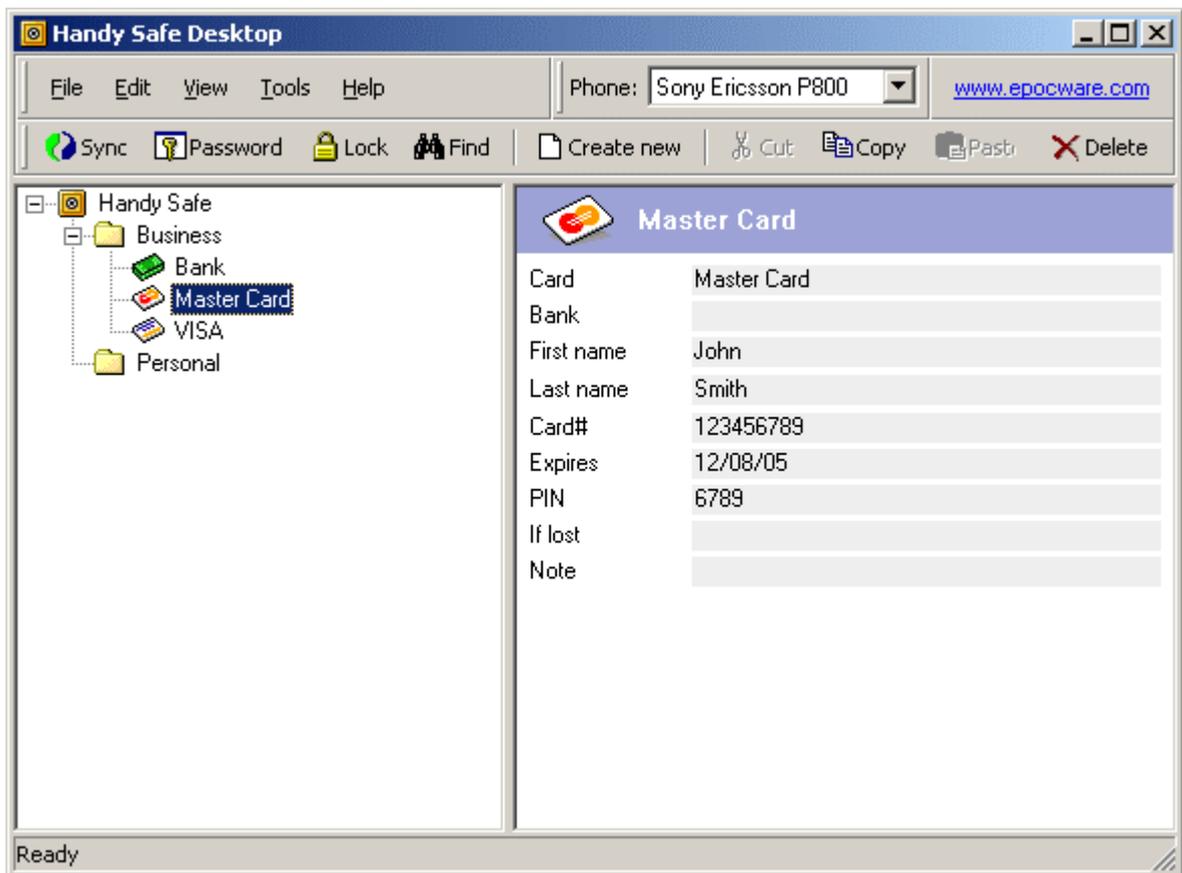

To sync your data with PC:

- Start **Handy Safe Desktop** on PC (via Start Menu> Programs> Epocware> Handy Safe).
- Close Handy Safe on the phone (select **Exit** on the **Handy Safe** menu) or just **Lock** it.
- Press the **Sync** button on the toolbar of Handy Safe Desktop.

Your data will be synchronized with PC.

### If you cannot sync:

- Make sure that you have **PC Suite** software installed on the PC and that the phone is connected.
- Make sure that you have the correct phone type selected in the toolbar of Handy Safe Desktop.

## Files

Handy Safe stores its data in two files: **Safe.ind** and **Safe.dat** in the **C:\System\Apps\Safe\** folder on the phone.

Handy Safe Desktop stores its data in the same two files: **Safe.ind** and **Safe.dat** in the **C:\Program Files\Epocware\Handy Safe\** folder on the PC.

✍ You can access **C:\System\Apps\Safe\** folder on the phone with freeware **File Manager** or with Epocware **PC File Manager** (get free trial version at [www.epocware.com](http://www.epocware.com)).
