## **1 Introduction**

There are three different ways to register your Y-Series application.

In all of those three cases a SMS is sent by your mobile phone to the registration server of Yellow Computing, containing all required data. This server generates a product key out of your IMEI and sends it back to your mobile phone automatically, depending on which type of registration you have chosen.

To get that product key, you need to have a serial number oder you need to buy that software license online via SMS.

All three ways will be explained in the following pages.

## **2 Enter serial nr.**

You'll get a such serial number if you buy the software in an online shop. If you've bought that software in one of your local software shops a serial number is with that package. (e.g. a sticker on the back of the Jewelcase of the CD)

If this is not the case, please contact Yellow Computing.

Now, let's start registering the application...

Choose in the registration dialog: Options -> „Enter serial nr.“.

Just put your Name, your E-Mail and your personal serial number in.

After the input of your data your mobile phone sends an registration SMS an within the next 5 minutes you'll get your key (via SMS) to unlock the application.

Please read Point 6 to look what to do now.

## **3 Buy license via SMS**

If you do not own a serial number, you're able to buy a license via SMS. To do so, please choose "Buy license" in the "Options" menu of the registration dialog. Now simply insert the required data like your name, your E-Mail and your credit card information. Now just choose "Buy now" and a message for our registration server will be generated and sent. After the receipt of money the product key to unlock the application will be sent to you.

Please read Point 6 to look what to do now.

## **4 Unlock with product key**

If your IMEI is know on our server, it is possible, that we send you a product key via E-Mail. With this key you're able to unlock the application by yourself. Just choose "Options-> "Enter product key" and put your key in. That's only in a case of emergency and can only be used after consultation with our customer support.

## **5 Restore registration**

Did you have any problems with your phone and you lost all your registration data on your phone? No problem, you can order a new product key for your device. Just choose „Restore registration“ and a notification-SMS is sent to our server and within the next 5 minutes you'll get a new registration message to reregister your application.

## **6 What shall I do after I've received this key via SMS?**

If you registered your application the way it is explained in Point 2, 4 and 5 you'll get this message within 5 minutes. Point 3 takes longer, because we only send the key after money receipt. You'll get a short notification message if we have received your order.

After you received the key via SMS:

Just open that message and your application will be registered!

The registration will still be present even if you deinstall your application, so you don't have to register anymore after a reinstallation.

## **7 Important registration notes:**

Your data is sent encrypted to our server, to preserve that 3<sup>rd</sup> parties can read them. Only our registration administrator has access to your data.

Did you lose your product key you'll be able to request it any time. The system knows your IMEI and sends a key back to you. The registered software runs only on your device. If you've changed your device because of a defect or something like that, please contact our customer support.
