GetIt FTP Release Notes

This document describes the new features, performance improvements and bug fixes in each release of GetIt FTP for Microsoft Pocket PC.

Version 3.0

NEW SSL/TLS SUPPORT	Added SSL/TLS support to protect login and file information. These features are described in the RFC 2577 (FTP Security Considerations) and Securing FTP With TLS (draft-murray-auth-ftp-ssl-09) documents.
NEW SECURITY CONFIGURATION PAGE	Added security configuration page (**Tools > Settings > Security**). These options allow you to specify a client certificate for your device.
NEW FTP SITE SECURITY DIALOG	Added FTP site security options (**File > Open... > Security**). These options allow you to select the connection mode (plain text, explicit SSL/TLS and implicit SSL/TLS) and data channel protection level.
FIXED CONTEXT MENU BUG	Fixed the 'tap and hold' event handling.
UPDATED DIALOGS	Updated many dialogs for a more consistent (centered fields and controls) 'look and feel.' This includes the new security, mirror and address dialogs.
NEW APPLICATION ICONS	Changed the application icons (now supports 256 color modes).
UPDATED ADDRESS BOOK FILE FORMAT	The address book file is now stored with the GetIt FTP executable and has been changed to accomodate the new FTP site security options.

FIXED PORT COMMAND LINE OPTION	Fixed a bug that prevented users from specifying an a port (other than 21) in the command line options.
FIXED PROTECTED DIRECTORY BUG	Added support for IBM OS/390 protected directory ('+' symbol) information.
NEW SYSTEM IDLE TIMER FEATURE	Added a new feature that prevents the device from going into 'sleep' mode during file transfers.
ADDED KEYBOARD SHORTCUT IN MIRROR DIALOG	Added automatic keyboard support in the mirror dialog.
FIXED SITE NAME IN MIRROR DIALOG	The mirror dialog now uses the user defined name label (instead of the site name).

Version 2.5

This is the last release of CedeFTP. All future enhancements will be part of GetIt FTP for Microsoft Pocket PC.

NEW ICONS	New application icon; new bitmaps in the toolbar. Mode button will stay depressed to indicate ASCII mode.
NEW FTP COMMAND LINE	New command line options (see User Guide) for developers.
NEW RUN IN BACKGROUND MODE	CedeFTP will run in the background so you can perform other tasks while uploading/downloading files. Use the **File > Hide Window** option to hide CedeFTP, and **Start Menu > CedeFTP** or **Today > System Tray > CedeFTP** to restore the application.
NEW TAB VIEW	CedeFTP uses tabs to switch between views. The old cycle method has been discarded.
NEW REFRESH BUTTON	The toolbar now contains a refresh button to update local and remote views.
NEW FILE AND FOLDER VIEWS	The file views use a new compact and color coded format; the local view can display the "associated" or "system" icon associated with files (**Tools > Settings > General**). The sort icon has been fixed.
NEW HANG-UP OPTION	CedeFTP will close your RAS connection upon exit.
NEW BANDWIDTH THROTTLE	Users with slow or unreliable network connections may wish to use the bandwidth throttling option (**Tools > Settings > Connection > Advanced...**). This feature allows you to limit the amount of network data to prevent overwhelming the connection.

REWORKED CONNECTION AND TRANSFER SETTINGS

Updated the Connection and Transfer setting pages (**Tools > Settings**) to accomodate new features.
