## Installing the service

Transfer the SIS file by Infra-red, Bluetooth or use the Nokia Suite Installation wizard

Go to the messages inbox folder and open the message.

Go through TWT Smart installation procedure.  
(Answer yes when asked "Install only if you trust provider.")

## First time activation wizard

1.

When activating the TWT Smart for the first time, you will be asked to choose the default voice gender. This will extract responses in a male or female voice.

2.

An introduction wizard appears.

3.

Record your greeting message such as "Hello" or "Hi" in your own voice. If you choose not to do so the system will use a default "Hello" message. You can edit this message anytime by going to Options > Settings > Hello msg

## Activating the application

4.

Select the profile that will activate the TWT service.

1.

Select your activation profile

2.

The application gets to foreground

## Answering a phone call

1.

Answer the incoming call. The application will go to the foreground. Selecting Voice Call will answer the call in a regular conversation, and selecting Silent Call will enable talking in silent with the TWT UI. For **Smart Reject** please read below.

\* For your convenience, we recommend using a headset.

2.

Using the joystick up/down left/right or typing a response you can play what ever you have to say. Listen to the distant party and continue selecting responses to be played.

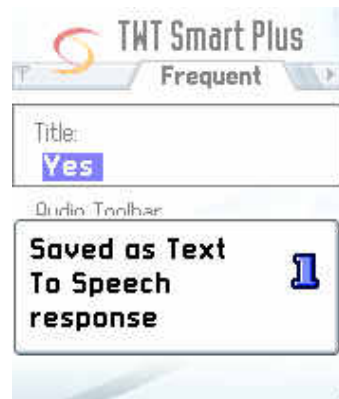

## Editing a response

1.

Select Options→Edit Mode and press the joystick to edit the requested response

2.

- Enter a title for the response.
- Record your response or press back to be pronounced using Text-To-Speech.
- Exit Edit mode by – Options – Edit Mode off

## Using Text-To-Speech

1.

2.

During a call, write the response to play. In case the desired response is not found the "Say Text" folder will appear.

# Settings Menu

## Activate on startup

Select **ON** if you want the TWT application to start automatically when the phone is turned on.

Select **OFF** if you don't want the application to start automatically when the phone is turned on.

The default is **ON**

## Play service message

Select this option if you want to enable/disable the service message. This message is played to notify the other end that you are conversing silently and explains the changes in voice or response time. The message is - "The subscriber is now listening, in order not to disturb others the subscriber is using the silent call service and may respond with a slight delay, please start talking".

## Mute on silent call

Select **ON** if you want the TWT application to mute the phone during a silent call.

Select **OFF** if you don't want the TWT application to mute the phone during a silent call.

The default is **OFF**

**Note: This feature is available only on Symbian 6.1, and 7.0**

## Set Silent Profile

When selecting this option, a list of the device's profiles is displayed. Choose the profile which will set the ringing menu option to **Silent Call**. On any other profile, the selected option is **Voice Call**.

The default profile is **silent**

## Text To Speech voice

Select a synthetic voice from a list of 9 voices - will be used for free text to speech.

Default male voice - Paul

Default female voice - Betty

## Text To Speech speed

Scroll the bar to change the synthetic voice speed from slow to fast.

## Hello message

The TWT application will play a human voice "Hello" message before the service message.

You can edit this message using the Record Toolbar.

### **Please Wait message**

This message notifies the caller that you are composing an "on the fly" response (during the conversation). The message is played once every 10 seconds until you send the composed response.

The default response is "Please wait I'm typing a response".

You can edit this message using the Record Toolbar.

### **Call Waiting message**

This message notifies the distant party whenever you're switch to another call (call waiting).

The default message is "The subscriber is on another call please hold"

You can edit this message using the Record Toolbar

## **Smart Reject**

Sometimes calls just can't be answered, however, the caller is too important for you to reject, or does not deserve such rudeness.

Smart Reject is designed for those situations exactly. With just one click the device can answer the call, play a response that promises your attention later, and terminate the call.

When you receive a call, a pop up menu appears with the "Smart Reject" option.

Choosing this option will bring up a list of ready to use responses with just one click.

After the response has been played, the call is terminated automatically.

You can change your smart reject folder any time

Go to Options->Edit Mode

Scroll left or right to the folder you'd like to be "Smart Reject"

Go to Options->Folders->Set as Smart Reject

Exit Edit Mode by choosing Options->Edit Mode off

## Silent Call Log

Every silent call conversation and smart reject operation are logged for later follow up.

You can view this log by going to Options->Log

The log appears with an icon next to the phone number:

Smart Reject 

Silent Call 

## Content Download portal

You can customize responses even further by using the response content download portal. Enrich your conversations with recordings of politicians, comedians, famous movie quotes or any other noises and sounds.

Go to Options->Downloads , You'll be connected to the content download portal

Browse to listen ,download ,save and edit responses

Exit Edit Mode by choosing Options->Edit Mode off
